**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 1, drawn to execution of a loader in accordance with a reset vector, classified in class 713, subclass 2.
  - II. Claim 2, drawn to a loader which upon OS activation suspends in an OS-protected state, and upon reset restarts and executes shutdown, classified in class 713, subclass 2.
  - III. Claims 3-4, drawn to data conversion to facilitate a repeated sequence, and back up upon reset without holding data in the memory, classified in class 713, subclass 1.
  - IV. Claim 5, drawn to a dummy section for user recording added to data for activating an OS, classified in class 713, subclass 1.
  - V. Claims 6-7, drawn to power source that is turned off in accordance with BIOS code or structure information recorded to RAM, classified in class 713, subclass 320.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III, IV, and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, each invention has separate utility since each describes elements not utilized by the others. Invention I executes a loader in accordance with a reset vector, which is revised by I/O of

cryptographic code. Invention II suspends a loader upon OS activation in a state protected from the OS, and upon reset restarts the loader to execute shutdown.

Invention III converts data to facilitate a repeated sequence, and backs up upon reset without holding data in the memory. Invention IV has a dummy section for user recording added to data for activating an OS. Invention V has a power source turned off in accordance with BIOS code or structure information recorded to RAM. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification (where indicated), restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for each group is not required for any other group, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Daniel Tanner on December 5, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
